VIA ECFS – Re: CG Docket 15-91 and 15-94, In the Matter of
Wireless Emergency Alerts

Dear Ms. Dortch,

On February 1, 2018 Charles H. Simon, Jr., CEO and Founder of Precision
Broadband LLC (PBB) met by phone with Eric Burger, FCC CTO.

Mr. Simon and Mr. Burger discussed the potential application of PBB's fixed
broadband location technology under development for the wireless alert system.
While the system is in it's early development stages and is focused on consumer
outbound 9-1-1 emergency communications by both mobile phone devices and
non-phone Internet of Things (IoT) devices, I explained that there might be
potential to likewise use the same system for location specific targeted outbound
public safety alerts. To this end, PBB will look to incorporate some development
and testing for such a purpose.

Regards,
/s/
